Ideation Phase

Brainstorm & Idea Prioritization Template

Date	24 September 2026
Team ID	23KD1A1507
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

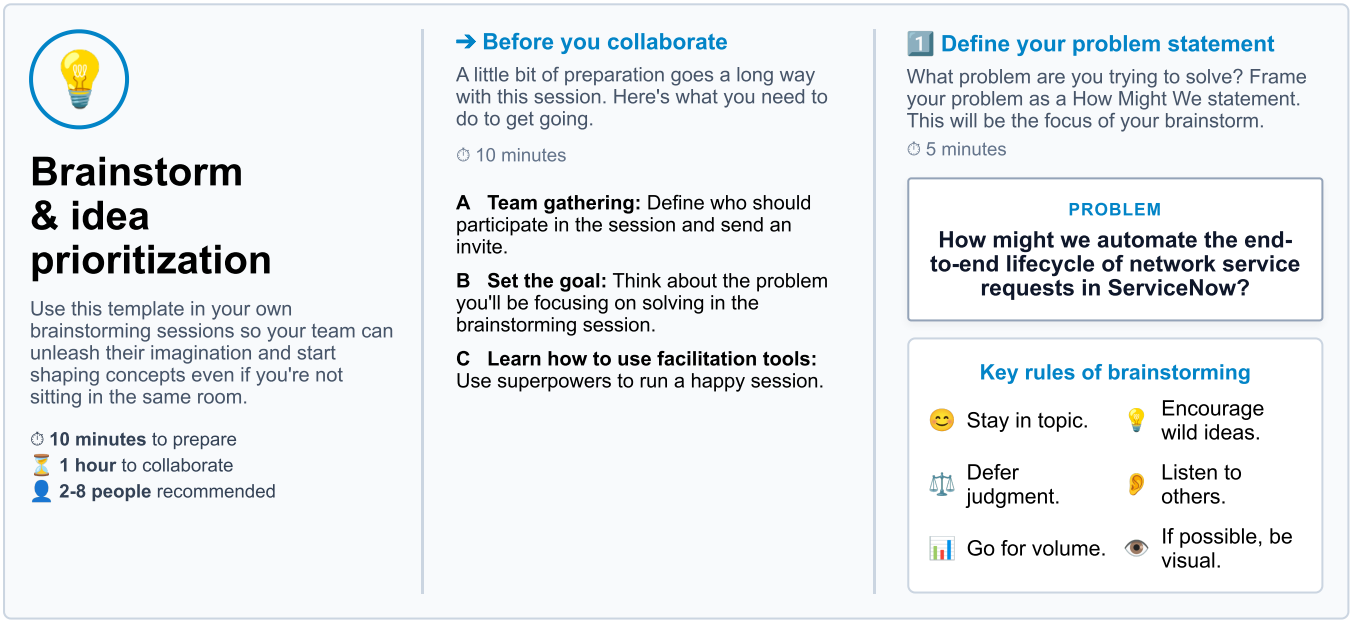

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Our Team's Work:

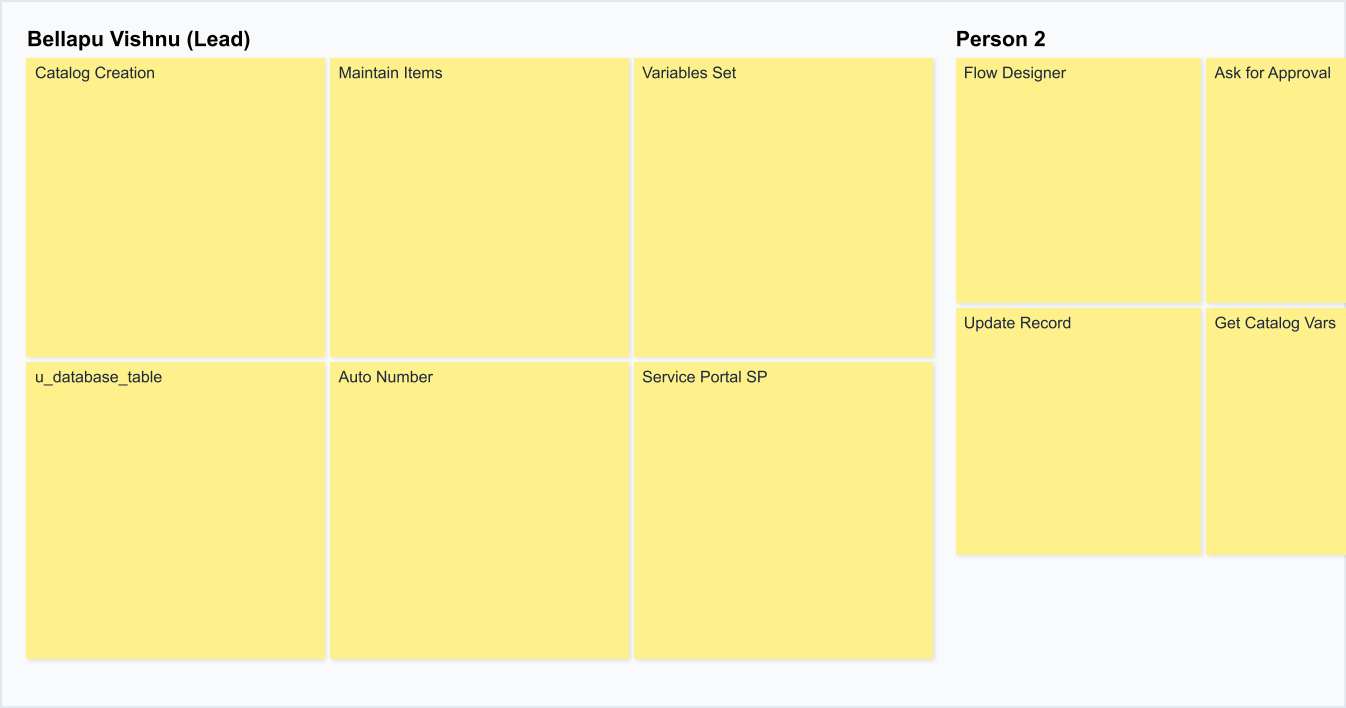

How Might We (HMW) Statement:

To streamline and automate the end-to-end lifecycle of network-related service requests using ServiceNow, thereby: Reducing manual effort and human error, Accelerating request fulfilment times, Enforcing standardized workflows and approval processes, Improving visibility and tracking through a centralized platform, Enhancing end-user experience with faster, more reliable service delivery, Ensuring compliance with IT and security policies.

Step-2: Brainstorm, Idea Listing and Grouping

2️⃣ **Brainstorm**
Write down any ideas that come to mind that address your problem statement. ⏱ 10 minutes

3️⃣ **Group ideas**
Take turns sharing your ideas while clustering similar or related notes as you go. ⏱ 20 minutes

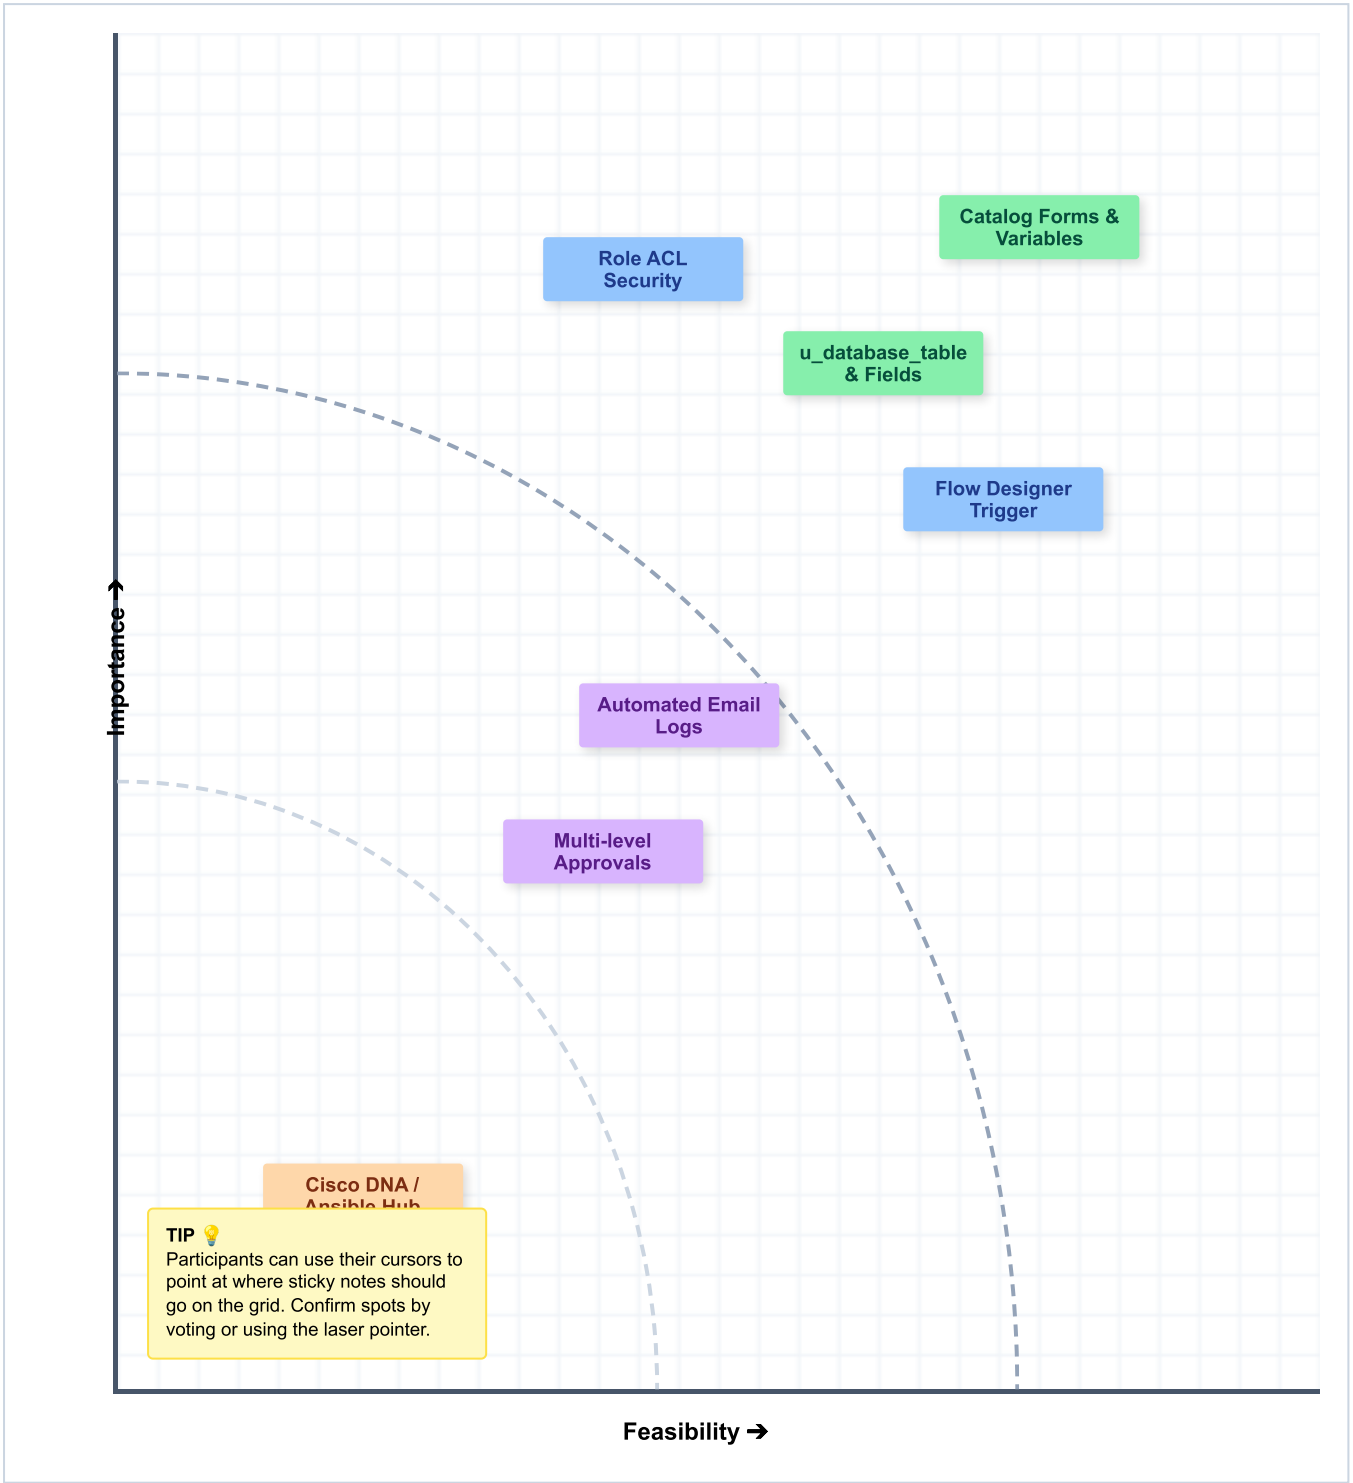

Our Team's Brainstormed Ideas (Grouped by Theme):

Theme	Ideas
Catalog Creation & Form Setup	Service Catalog creation under Network category, Maintain Items, Catalog item forms using variables, Variable sets for requester information, Dynamic behaviors (show/hide fields based on selection), Mandatory fields to reduce incomplete submissions.
Data Architecture	Custom Database table creation (`u_database_table`), Auto Number field prefix and format, Fields: Database Number, Assignment to, Mobile Number, Total Amount, Mode of Payment, Type of Connection, Customer Address, Approval Status, Requested For.
Approval Integration	Flow Designer workflow setup, Approval chains (Manager approval for standard requests, Network security approval for high-sensitivity requests, Group approval for department-specific tasks), Ask for Approval flow logic step.
Automation Logic	Get Catalog Variables action, Create Record on Database Table, Send Email notifications (Sent/Received logs), Update Record logic, Flow Execution Logs tracing.
Security & Operations	Role-based Access Control Rules (ACLs) to restrict read/write access, Mandatory client/server validations, Approval state validation, Service Portal interface integration (`/sp`), System logs and audit history.

Step-3: Idea Prioritization

4️⃣ **Prioritize:** Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible. ⏱ 20 minutes

Our Team's Idea Prioritization (Importance vs. Feasibility):

Idea	Importance	Feasibility	Priority
Service Catalog creation & Form Setup (Variables)	High	High	Build first
Custom Table Creation (`u_database_table`) & Fields	High	High	Build first
Flow Designer trigger & Get Catalog Variables	High	High	Build first
Role-based Access Control Rules (ACLs) configuration	High	High	Build first
Automated Send Email notifications & Email logs	High	Medium	Build second
Multi-level Approval integration (Manager & Network Security)	High	Medium	Build second
Auto-provisioning via Cisco DNA Centre / Ansible integration	Medium	Low	Stretch goal
Reporting dashboards for request volume & fulfillments	Medium	Medium	Stretch goal
